[Gerelateerde informatie](#)

## [Inleiding](#)

Cisco Secure PIX-firewall-softwareleases 6.0 en latere ondersteuningsverbindingen met Cisco VPN-client 3.x en 4.x. Deze voorbeeldconfiguratie toont twee verschillende versies van VPN-clients die verkeer met de PIX verbinden en versleutelen als het tunnelpunt. In deze configuratie wordt een pool van adressen ingesteld die voor IP security (IPSec) moet worden toegewezen.

## [Voorwaarden](#)

### [Vereisten](#)

Deze voorbeeldconfiguratie is gebaseerd op de veronderstelling dat PIX al werkt met geschikte statcs, conduits of toegangslijsten. Dit document is niet bedoeld om deze basisconcepten te illustreren, maar om connectiviteit op de PIX van een Cisco VPN-client te tonen.

### [Gebruikte componenten](#)

De informatie in dit document is gebaseerd op de volgende software- en hardware-versies:

- PIX-softwarelease 6.2(1)SN.B.: Deze instelling is getest op PIX-softwarelease 6.2(1), maar moet werken aan eerdere releases terug naar 6.0(1) en latere releases.

- Cisco VPN-clientversie 3.6 RelN.B.: Deze instelling is getest op VPN-client v4.0 Rel, maar dient te werken aan eerdere releases terug naar 3.0 en tot de huidige release.

De informatie in dit document is gebaseerd op de apparaten in een specifieke laboratoriumomgeving. Alle apparaten die in dit document worden beschreven, hadden een opgeschoonde (standaard)configuratie. Als uw netwerk live is, moet u de potentiële impact van elke opdracht begrijpen.

## Conventies

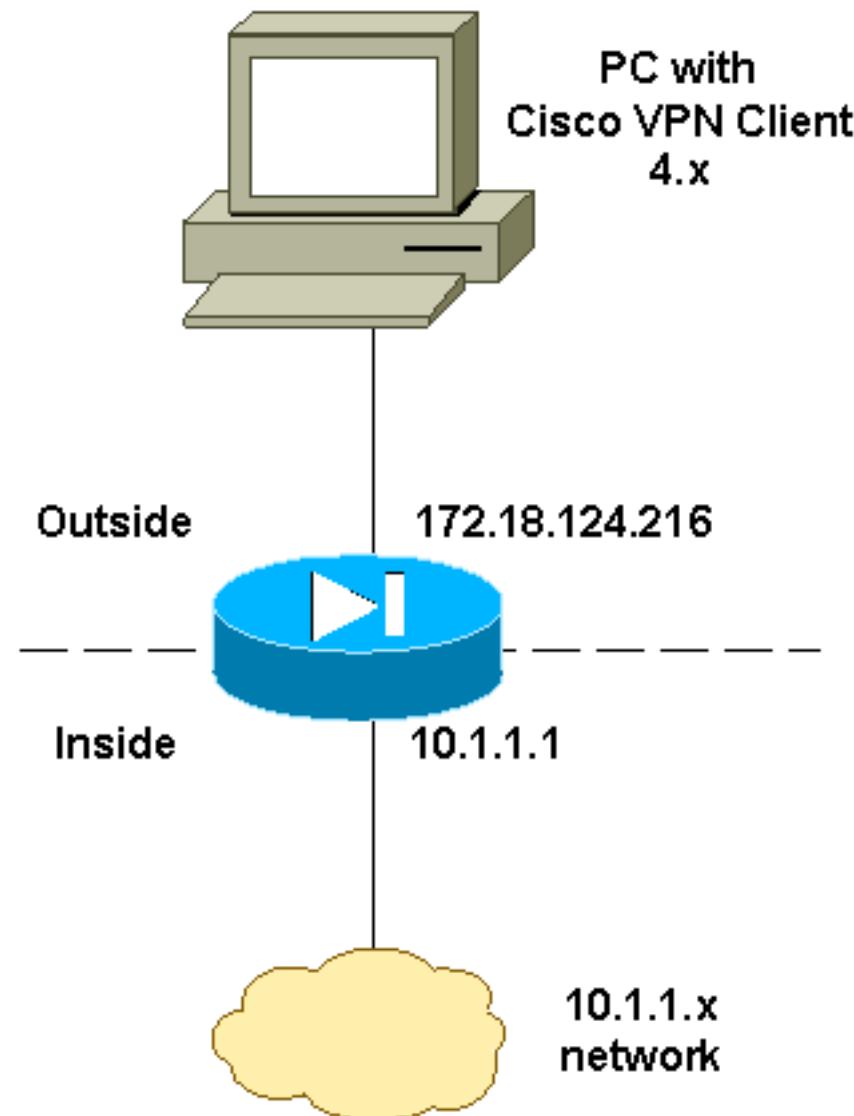

Raadpleeg [Cisco Technical Tips Conventions \(Conventies voor technische tips van Cisco\)](#) voor meer informatie over documentconventies.

## Configureren

Deze sectie bevat informatie over het configureren van de functies die in dit document worden beschreven.

### Netwerkdiagram

Het netwerk in dit document is als volgt opgebouwd:

## PIX configureren

N.B.: Gebruik het [Opdrachtupgereedschap \(alleen geregistreerde klanten\)](#) om meer informatie te vinden over de opdrachten die in dit document worden gebruikt.

```

## De Cisco VPN-client configureren

Voltooи deze stappen om een nieuwe verbinding te maken met de VPN-client.

1. Start de VPN-client en klik vervolgens op **New** om een nieuwe verbinding te maken.

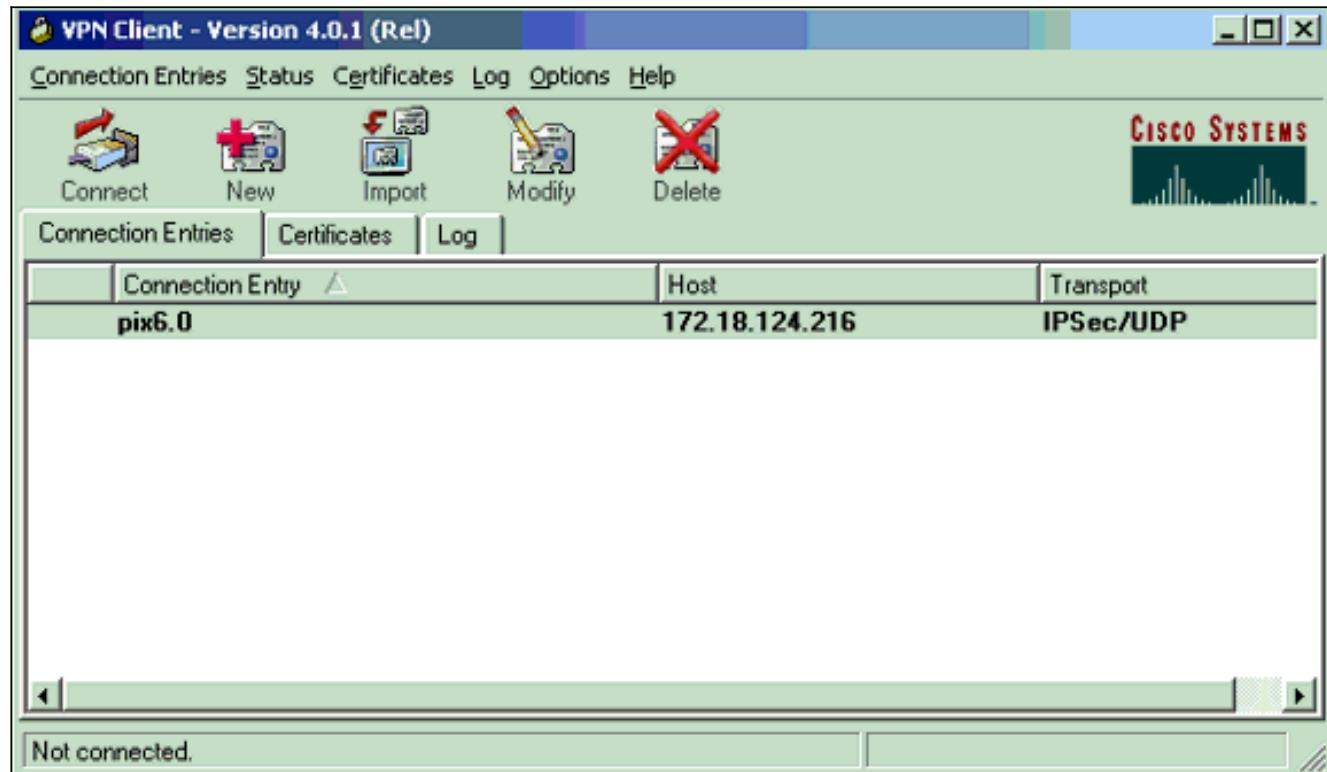

2. Geef configuratieinformatie op voor de nieuwe verbinding. Geef in het veld Toegang tot verbinding een naam aan de ingang toe. Voer in het veld Host het IP-adres van de openbare interface van de PIX in. Kies het tabblad Verificatie en voer vervolgens de groep en het wachtwoord in (tweemaal - voor bevestiging). Klik na voltooiing van het programma op

Opslaan.

3. Klik op Connect om verbinding te maken met de

PIX.

## Verifiëren

Gebruik dit gedeelte om te bevestigen dat de configuratie correct werkt.

Het [Uitvoer Tolk \(uitsluitend geregistreerde klanten\)](#) (OIT) ondersteunt bepaalde **show** opdrachten. Gebruik de OIT om een analyse van **tonen** opdrachtoutput te bekijken.

- **toon crypto isakmp sa**-Bekijk alle huidige IKE (Internet Key Exchange) veiligheidsassociaties (SAs) bij een peer.
- **Laat crypto ipsec sa**-View de instellingen zien die door huidige SAs worden gebruikt.

## Problemen oplossen

Gebruik dit gedeelte om de configuratie van het probleem op te lossen.

### [Opdrachten voor troubleshooting](#)

**Opmerking:** Raadpleeg [Belangrijke informatie over debug Commands](#) voordat u **debug**-opdrachten gebruikt.

- **debug van crypto ipsec**: gebruik om de IPSec-onderhandelingen van fase 2 te zien.
- **debug van crypto isakmp** - gebruik om de ISAKMP-onderhandelingen van fase 1 te zien.
- **debug crypto motor** - toont het verkeer dat wordt versleuteld.

### [Voorbeeld van output van foutopsporing](#)

Dit is een voorbeeld van een goede debug die met de Cisco VPN 3.0.x-client is gegenereerd:

```
goss-d3-pix515b#debug crypto isakmp
goss-d3-pix515b#debug crypto ipsec
