[Inleiding](#)

Dit document beschrijft hoe u de Cisco Secure PIX-firewall in een site-to-site IPSec VPN kunt configureren met overlappende privé-netwerkadressen achter VPN-gateways. De uitgebreide NAT-optie (Network adresomzetting) die in PIX 6.2 is geïntroduceerd, wordt in dit voorbeeld gebruikt om de overlappende netwerken aan elke kant van de IPSec VPN-tunnel te vertalen naar niet-overlappende adresruimtes.

[Voorwaarden](#)

[Vereisten](#)

Er zijn geen specifieke vereisten van toepassing op dit document.

[Gebruikte componenten](#)

De informatie in dit document is gebaseerd op de volgende software- en hardware-versies:

- Cisco Secure PIX-firewall 506 met softwareversie 6.3(3)
- VPN 3030 Concentrator met softwareversie 4.1(5)

De informatie in dit document is gebaseerd op de apparaten in een specifieke laboratoriumomgeving. Alle apparaten die in dit document worden beschreven, hadden een opgeschoonde (standaard)configuratie. Als uw netwerk live is, moet u de potentiële impact van elke opdracht begrijpen.

Conventies

Raadpleeg voor meer informatie over documentconventies de [technische Tips](#) van [Cisco](#).

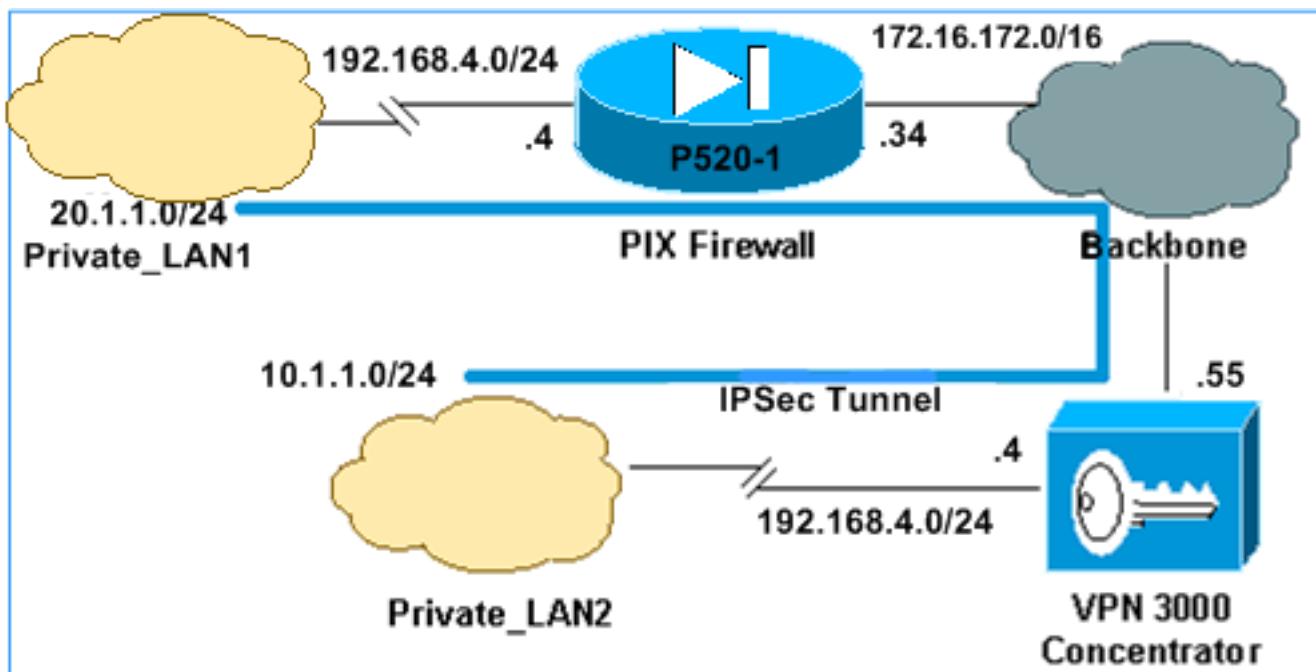

Configureren

Deze sectie bevat informatie over het configureren van de functies die in dit document worden beschreven.

N.B.: Als u aanvullende informatie wilt vinden over de opdrachten in dit document, gebruikt u het [Opdrachtplanningprogramma](#) (alleen [geregistreerd](#) klanten).

Netwerkdiagram

Dit document gebruikt de netwerkinstellingen die in dit diagram worden weergegeven.

Zowel Private_LAN1 als Private_LAN2 hebben een IP-subtype van 192.168.4.0/24. Dit simuleert de overlappende adresruimte achter elke kant van de IPSec-tunnel. De VPN 3000 Concentrator wordt hier gebruikt als voorbeeld van een concentrator die niet de functionaliteit van NAT over VPN-verkeer heeft.

In dit voorbeeld voert de PIX een tweerichtingsvertaling uit zodat de twee particuliere LAN's via de IPSec-tunnel kunnen communiceren. De vertaling betekent dat Private_LAN1 "ziet" Private_LAN2 als 10.1.1.0/24 door de IPSec-tunnel en Private_LAN2 "ziet" Private_LAN1 als 20.1.1.0/24 door de IPSec-tunnel.

VPN 3000 Concentrator LAN-to-LAN tunnelconfiguratie

Voor het doeladres 20.1.1.0/24 (Private_LAN1) moet u een statische route op VPN 3000 hebben. U kunt dit doen door **Configuration > System > IP Routing > Static Routes** te selecteren en **Add** te kiezen. Nadat u de velden invullen, klikt u op **Toevoegen**.

The screenshot shows the 'Static Routes' configuration page. At the top, there is a header bar with tabs: Configuration | System | IP Routing | Static Routes | Add. Below the header, a message says 'Configure and add a static route.' There are three input fields for the source network: 'Network Address' (20.1.1.0), 'Subnet Mask' (255.255.255.0), and 'Metric' (1). To the right of each field is a descriptive text label. Below these fields is a section titled 'Destination' with two input fields: 'Router Address' (172.16.172.34) and 'Interface' (Ethernet 2 (Public) (172.16.172.55)). To the right of the 'Router Address' field is a descriptive text label. At the bottom of the form are two buttons: 'Add' and 'Cancel'. The 'Add' button is highlighted with a green background.

Gebruik de instellingen in deze afbeeldingen om uw VPN 3000 Concentrator te configureren.

Add a new IPSec LAN-to-LAN connection.

Enable

Check to enable this LAN-to-LAN connection.

Name ToPIX

Enter the name for this LAN-to-LAN connection.

Interface

Ethernet 2 (Public) (172.16.172.55)

Select the interface for this LAN-to-LAN connection.

Connection Type

Bi-directional

Choose the type of LAN-to-LAN connection. An *Originate-Only* connection may have multiple peers specified below.

Peers

172.16.172.34	<input type="button" value="▲"/>
<input type="button" value="▼"/>	

Enter the remote peer IP addresses for this LAN-to-LAN connection. *Originate-Only* connection may specify up to ten peer IP addresses. Enter one IP address per line.

Digital Certificate

None (Use Preshared Keys)

Select the digital certificate to use.

Certificate Entire certificate chain

Choose how to send the digital certificate to the IKE peer.

Transmission Identity certificate only

Enter the preshared key for this LAN-to-LAN connection.

Preshared Key cisco123

Specify the packet authentication mechanism to use.

Authentication ESP/MD5/HMAC-128

Specify the encryption mechanism to use.

Encryption DES-56

Select the IKE Proposal to use for this LAN-to-LAN connection.

IKE Proposal IKE-DES-MD5

Choose the filter to apply to the traffic that is tunneled through this LAN-to-LAN connection.

Filter —None—

Check to let NAT-T compatible IPsec peers establish this LAN-to-LAN connection through a NAT device. You must also enable IPsec over NAT-T under NAT Transparency.

IPSec NAT-T

Choose the bandwidth policy to apply to this LAN-to-LAN connection.

Bandwidth Policy —None—

Choose the routing mechanism to use. **Parameters below are ignored if Network Autodiscovery is chosen.**

Routing None

Local Network: If a LAN-to-LAN NAT rule is used, this is the Translated Network address.

Network List

Use IP Address/Wildcard-mask below

Specify the local network address list or the IP address and wildcard mask for this LAN-to-LAN connection.

IP Address

Note: Enter a **wildcard mask**, which is the **reverse of a subnet mask**. A wildcard mask has 1s in bit positions to ignore, 0s in bit positions to match. For example, 10.10.1.0/0.0.0.255 = all 10.10.1.nnn addresses.

Remote Network: If a LAN-to-LAN NAT rule is used, this is the Remote Network address.

Network List

Use IP Address/Wildcard-mask below

Specify the remote network address list or the IP address and wildcard mask for this LAN-to-LAN connection.

IP Address

Note: Enter a **wildcard mask**, which is the **reverse of a subnet mask**. A wildcard mask has 1s in bit positions to ignore, 0s in bit positions to match. For example, 10.10.1.0/0.0.0.255 = all 10.10.1.nnn addresses.

Add

Cancel

Verifiëren

Deze sectie verschaft informatie die u kunt gebruiken om te bevestigen dat uw configuratie correct werkt.

Bepaalde opdrachten met **show** worden ondersteund door de tool [Output Interpreter \(alleen voor geregistreerde klanten\)](#). Hiermee kunt u een analyse van de output van opdrachten met **show** genereren.

- **toon crypto isakmp sa** - display alle huidige IKE-beveiligingsassociaties (Internet Key Exchange) bij een peer.
- **Laat crypto isakmp als detail zien** - toon de details van alle huidige IKE SA's bij een peer.
- **toon crypto ipsec sa** - Hiermee worden de instellingen weergegeven die door huidige SA's worden gebruikt.
- **Gedetailleerde informatie tonen** - Hiermee geeft u informatie over de vertaalsleuf weer.
