[Inleiding](#)

Multilink PPP (MLP) balanst over dialerinterfaces, zoals ISDN, synchrone en asynchrone interfaces. MLP versplintert pakketten en stuurt de fragmenten via parallelle circuits. Op deze manier verbetert MLP de doorvoersnelheid en vermindert het de latentie tussen systemen. MLP biedt een methode om datagrammen te splitsen, te recombineren en te sequenseren over meerdere logische gegevenslinks. MLP staat pakketten toe om te fragmenteren, en de fragmenten om tegelijkertijd over meerdere point-to-point links naar hetzelfde externe adres te worden verzonden.

Dit document illustreert een multilink-verbinding tussen seriële interfaces via de configuratie van de virtuele sjabloon.

[Voorwaarden](#)

[Vereisten](#)

Er zijn geen specifieke vereisten van toepassing op dit document.

[Gebruikte componenten](#)

De informatie in dit document is gebaseerd op de volgende software- en hardware-versies:

- Cisco IOS® softwarerelease 11.2 of hoger.
- Twee Cisco 2503 routers, die twee WAN-seriële interfaces elk hebben. Op deze routers wordt Cisco IOS-softwarerelease 12.2(7b) uitgevoerd.

De informatie in dit document is gebaseerd op de apparaten in een specifieke laboratoriumomgeving. Alle apparaten die in dit document worden beschreven, hadden een opgeschoonde (standaard)configuratie. Als uw netwerk live is, moet u de potentiële impact van elke opdracht begrijpen.

Verwante producten

Deze configuratie kan ook worden gebruikt met deze hardware- en softwareversies.

- Om het even welke twee routers die twee WAN seriële interfaces hebben. U kunt WIC-1T, WIC-2T en vaste WAN-seriële interfaces gebruiken.

Conventies

Raadpleeg [Cisco Technical Tips Conventions \(Conventies voor technische tips van Cisco\)](#) voor meer informatie over documentconventies.

Configureren

Deze sectie bevat informatie over het configureren van de functies die in dit document worden beschreven.

N.B.: Gebruik het [Opdrachtupgereedschap \(alleen geregistreerde klanten\)](#) om meer informatie te vinden over de opdrachten die in dit document worden gebruikt.

Netwerkdiagram

Het netwerk in dit document is als volgt opgebouwd:

Virtual-Template1 - 10.1.1.1

Montecito

Virtual-Template1 - 192.168.10.2

Goleta

Routers Montecito en Goleta worden aangesloten terug-aan-terug door interfaces Seriele0 en Seriele1. Deze configuratie gebruikt een Virtual-sjabloon op elke kant, Multilink Point-to-Point Protocol (PPP), en bruggen en routes IP en IPX tussen de routers.

Configuraties

Dit document gebruikt deze configuraties:

- [Montecito](#)
- [Goleta](#)

Montecito

Verifiëren

Gebruik dit gedeelte om te bevestigen dat de configuratie correct werkt.

Het [Uitvoer Tolk](#) ([uitsluitend geregistreerde](#) klanten) (OIT) ondersteunt bepaalde **show** opdrachten. Gebruik de OIT om een analyse van **tonen** opdrachtoutput te bekijken.

- **toon PPP multilink**—geeft informatie weer over multilink bundels die actief zijn. Gebruik deze opdracht om de multilink-verbinding te controleren.
- **De status van de interface virtuele toegang** weergeven, verkeersgegevens en configuratieinformatie over een specifieke virtuele toegangsinterface.
- **serie van de tonen interface** - stelt u in staat om problemen met de seriële interface op te lossen

Problemen oplossen

Gebruik dit gedeelte om de configuratie van het probleem op te lossen.

Bronnen voor probleemoplossing

Gebruik deze bronnen voor probleemoplossing zoals vereist:

- [Probleemoplossing voor seriële lijnproblemen](#)
- [HDLC Terug-naar-Back verbindingen](#)
- Handelstopstenen voor probleemoplossing

Opdrachten voor troubleshooting

Het [Uitvoer Tolk](#) ([uitsluitend geregistreerde](#) klanten) (OIT) ondersteunt bepaalde **show** opdrachten. Gebruik de OIT om een analyse van **tonen** opdrachtoutput te bekijken.

Opmerking: Raadpleeg [Belangrijke informatie over debug Commands](#) voordat u debug-opdrachten gebruikt.

- **debug PPP onderhandeling**-wijst erop of een client PPP onderhandeling passeert. Controleer ook op adresonderhandeling.
- **debug van PPP-authenticatie** geeft aan of een client authenticatie passeert. Gebruik deze opdracht als u Cisco IOS-softwarerelease 11.2 of hoger gebruikt.
- **debug ppketting**-wijst erop of een client authenticatie passeert. Gebruik deze opdracht als u een Cisco IOS-softwarerelease eerder dan release 11.2 gebruikt.
- **debug van PPP**: toont protocol fouten en foutstatistieken die bij de verbindingsonderhandeling en -handeling in PPP zijn gekoppeld.
- **debug Vsjabloon**: hiermee kunt u zien welke configuraties met virtuele sjablonen worden gebruikt.
- **debug vprofile**-stelt u in staat te zien welke configuratieopties zijn toegepast op de virtuele toegang interface.

Voorbeeld van output van foutopsporing

Hier zijn een paar debug uitgangen voor succesvolle oproepen. Let op de gedeelte in **vet** lettertype. Vergelijk de output die u hier behaalt met het resultaat dat hier wordt getoond:
