[Informações Relacionadas](#)

[Introduction](#)

Este documento descreve como configurar um roteador Cisco IOS® que termina Clientes Windows 2000 Point-to-Point Tunnelling Protocol (PPTP) e Microsoft Point-to-Point Encryption Protocol (MPPE)

Consulte [Configuração da Autenticação PPTP do Cisco Secure ACS for Windows Router](#) para obter mais informações sobre a autenticação PPTP com o Cisco Secure Access Control Server (ACS).

[Prerequisites](#)

[Requirements](#)

Não existem requisitos específicos para este documento.

[Componentes Utilizados](#)

As informações neste documento são baseadas nas versões de software e hardware:

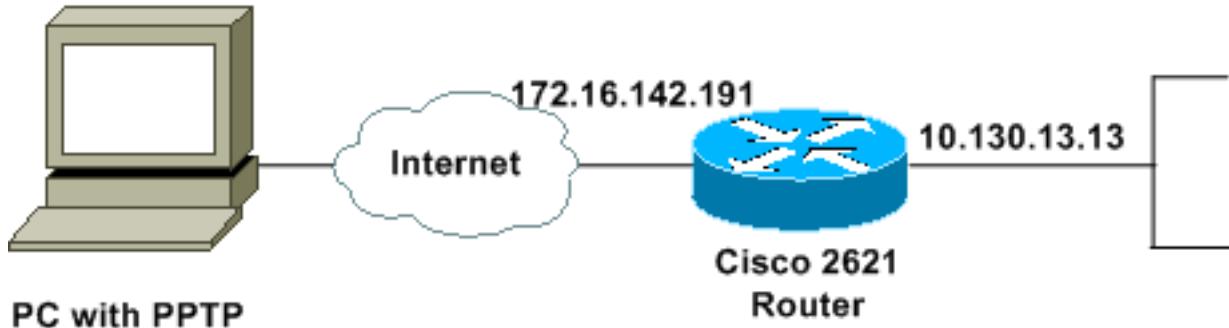

- Roteador Cisco 2621 que executa o Software Cisco IOS versão 12.2
- Microsoft Windows 2000

The information in this document was created from the devices in a specific lab environment. All of

the devices used in this document started with a cleared (default) configuration. If your network is live, make sure that you understand the potential impact of any command.

[Diagrama de Rede](#)

Este documento utiliza a seguinte configuração de rede:

[Conventions](#)

Consulte as [Convenções de Dicas Técnicas da Cisco para obter mais informações sobre convenções de documentos](#).

[Configuração do roteador PPTP](#)

Esse comando IOS é aplicável a todas as plataformas que suportam PPTP.

```
2621#configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
!---- Enable virtual private dial-up networking. 2621(config)#vpdn enable
!---- Enters VPDN group configuration mode for the specified VPDN group. 2621(config)#vpdn-group
1
!---- Enters VPDN accept-dialin configuration mode !--- and enables the router to accept dial-in
requests. 2621(config-vpdn)#accept-dialin
!---- Specifies which PPTP protocol is used. 2621(config-vpdn-acc-in)#protocol pptp
!---- Specifies the virtual template that is used !--- in order to clone the virtual access
interface. 2621(config-vpdn-acc-in)#virtual-template 1
2621(config-vpdn-acc-in)#exit

2621(config)#ip local pool test 192.168.1.1 192.168.1.250
!---- Create virtual-template interface used for cloning !--- virtual-access interfaces with the
use of address pool test !--- with Challenge Authentication Protocol (CHAP) authentication, PAP,
and MS-CHAP. 2621(config)#interface virtual-template 1

Configuração do roteador com MPPE e MS-CHAP

```
!---- Enter configuration commands, one per line. !---- End with CNTL/Z. 2621(config)#interface  
virtual-Template1  
2621(config-if)#ppp authentication ms-chap  
2621(config-if)#ppp encrypt mppe ?  
128    128 Bit Encryption only  
40     40 Bit Encryption only  
auto   Will offer 40 and 128 bit if available  
  
2621(config-if)#ppp encrypt mppe auto  
2621(config-if)#ppp encrypt mppe auto required
```

Configurações e configuração do Windows 2000 VPN (PPTP)

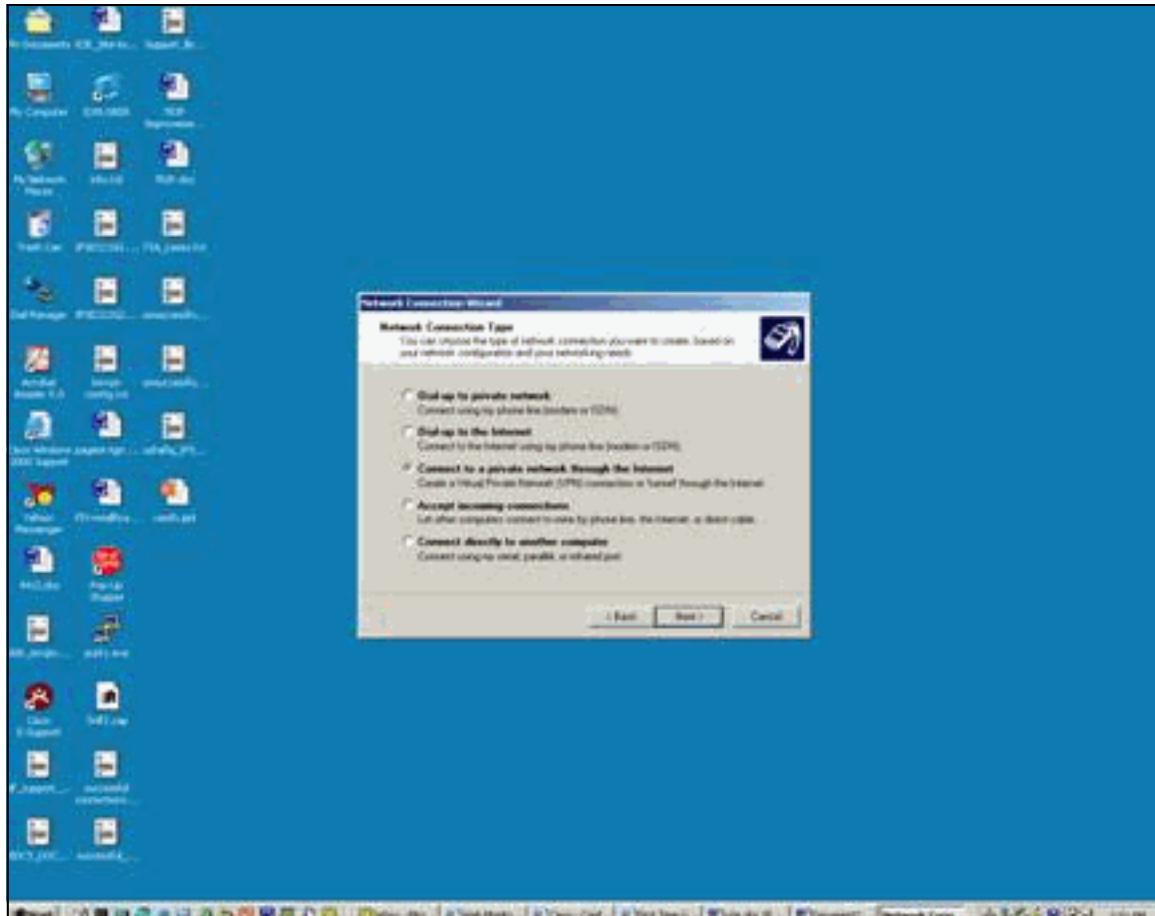

Conclua estes passos:

1. Escolha Iniciar > Configurações > Conexões de Rede e Dial-up > Criar Nova

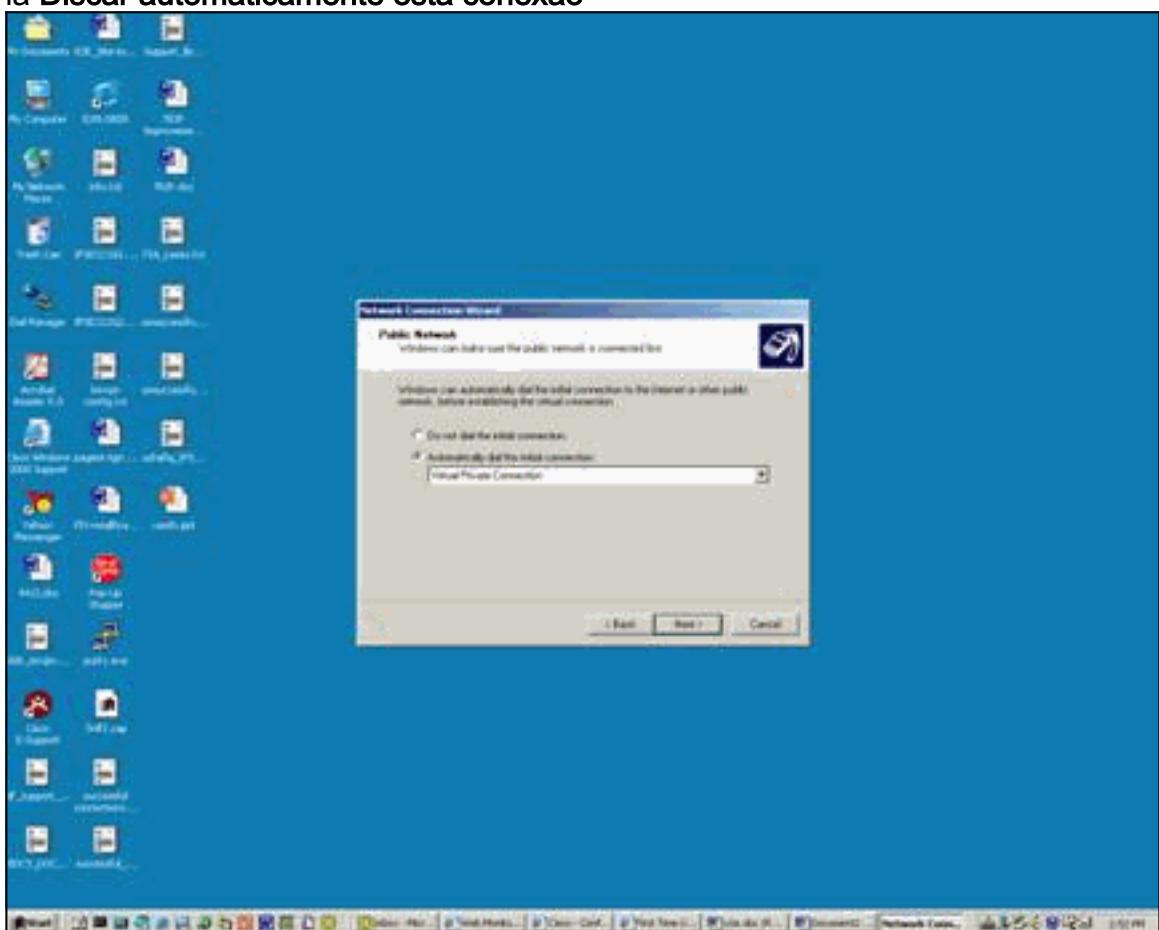

Conexão.

2. Depois que a janela Assistente de conexão de rede for exibida, escolha **Tipo de conexão de rede** e **Conecte-se a uma rede privada pela**

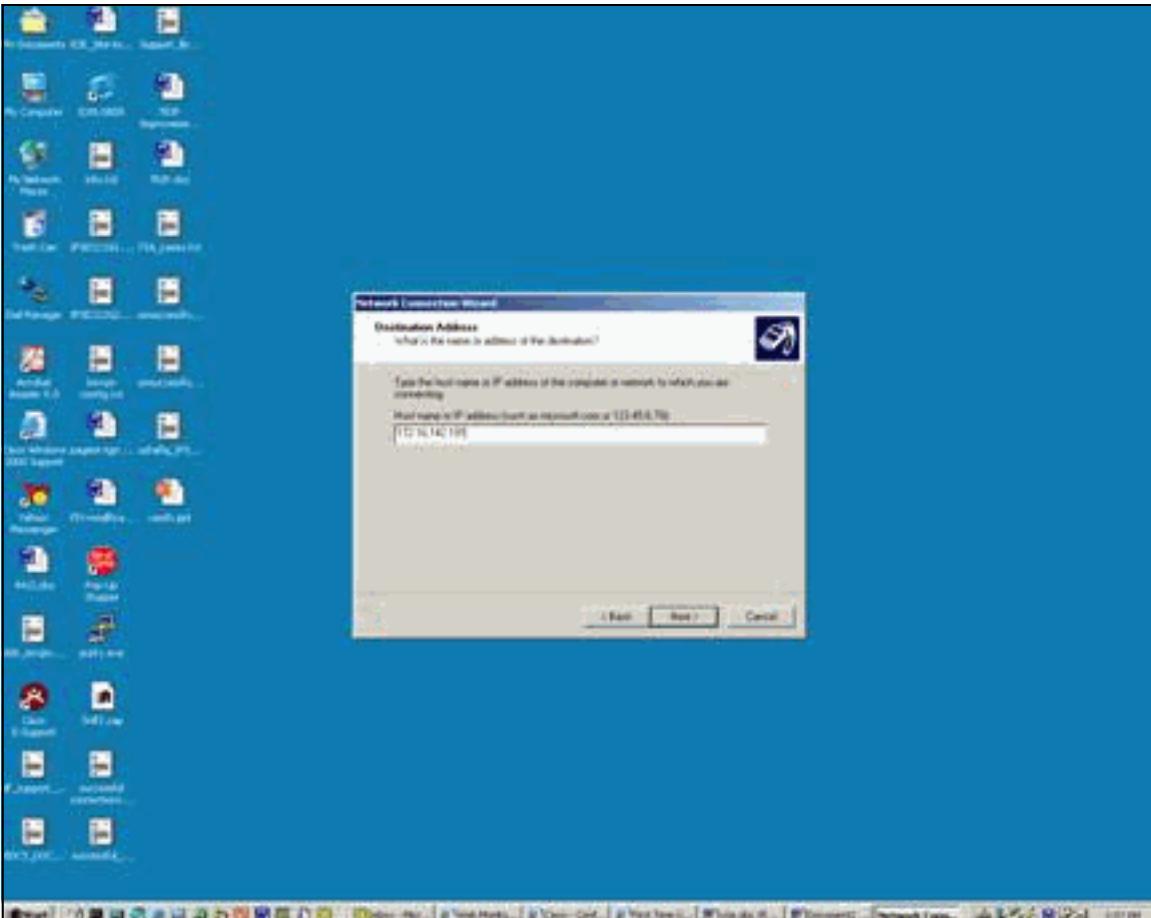

Internet.

3. Escolha Discar automaticamente esta conexão

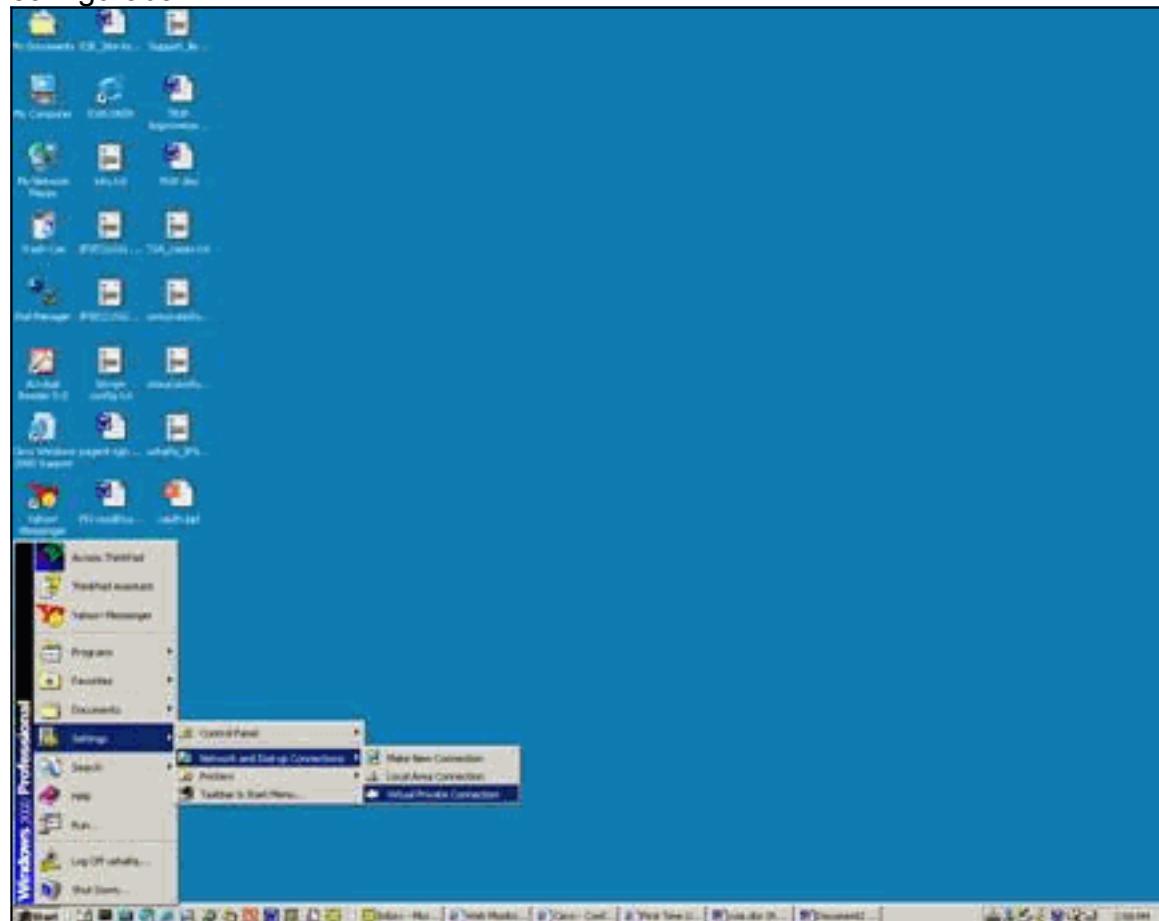

inicial.

4. Especifique um endereço de destino no campo Host ou endereço IP e clique em

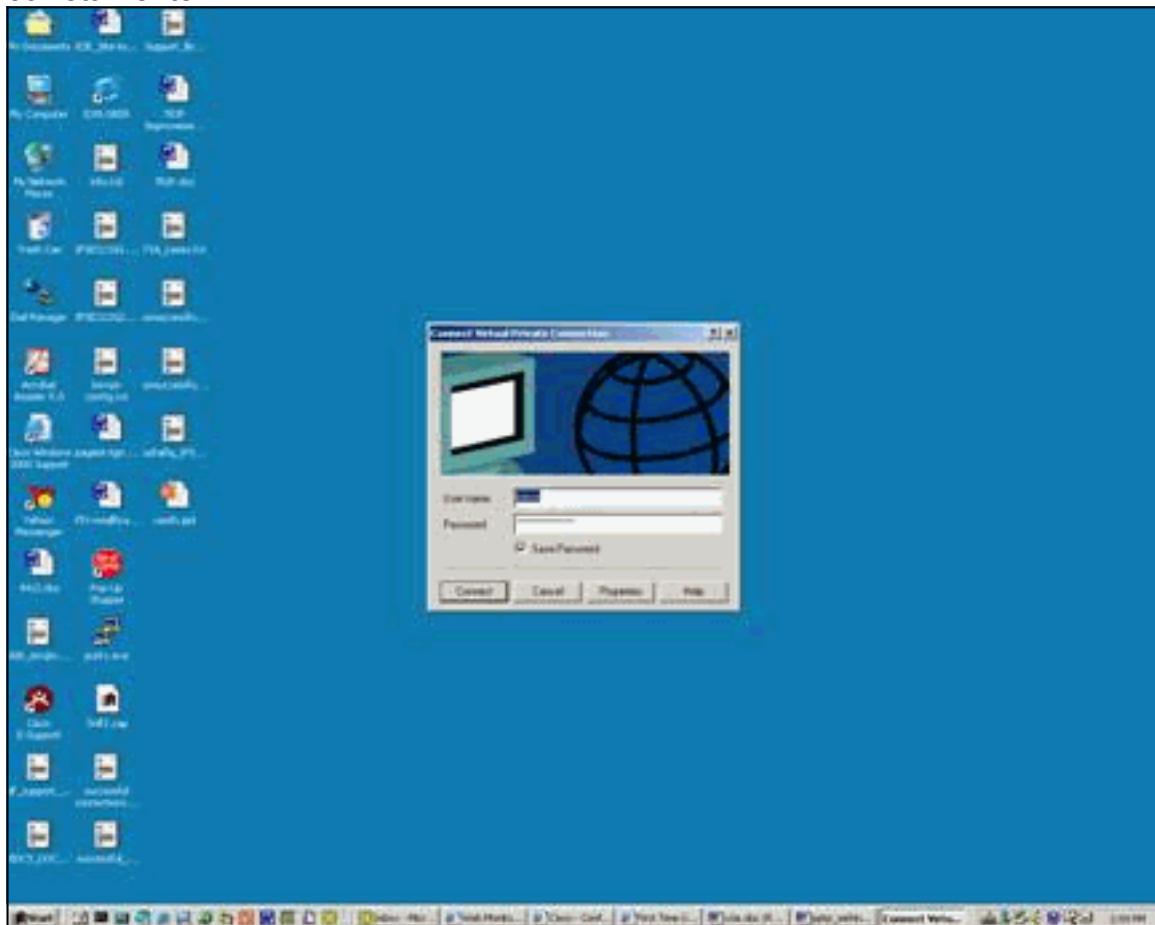

Avançar.

5. Escolha Iniciar > Configurações > Conexões de rede e de discagem e selecione a conexão recentemente configurada.

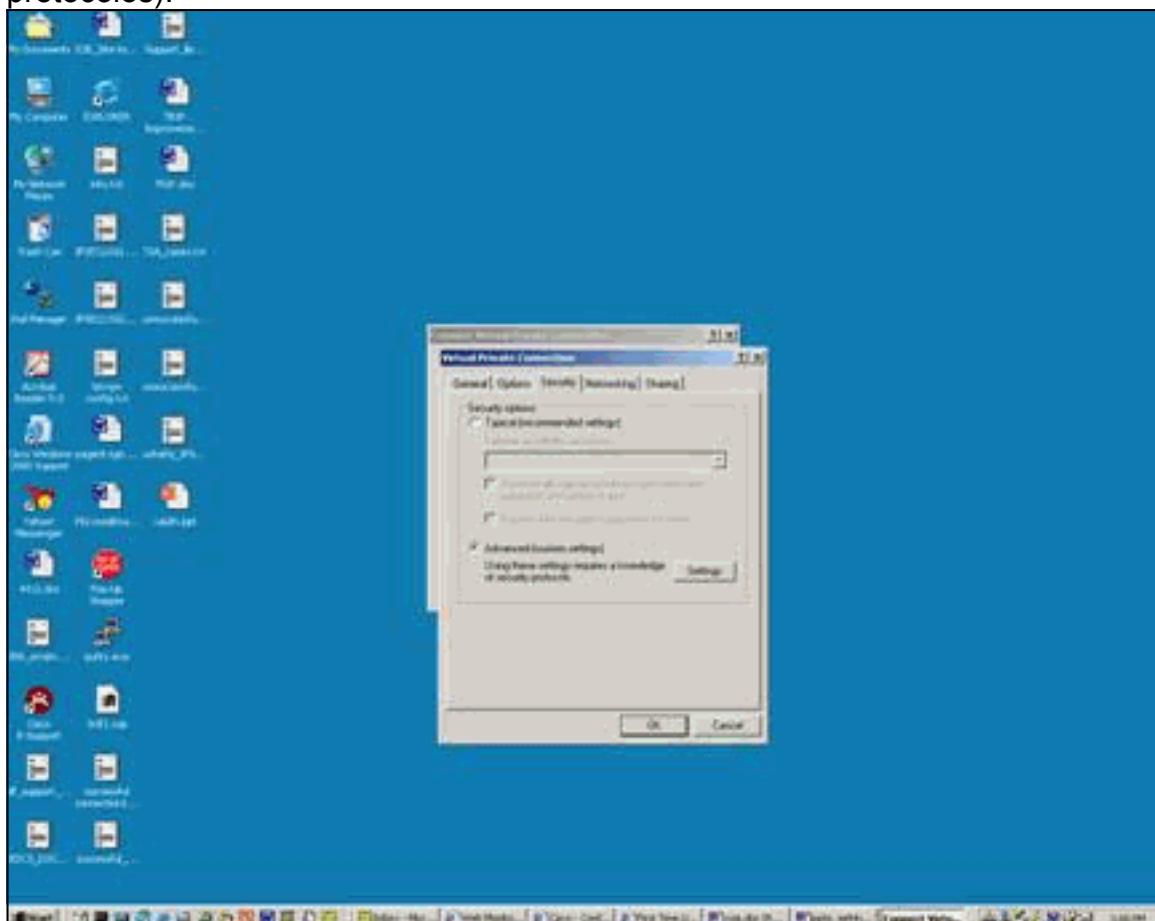

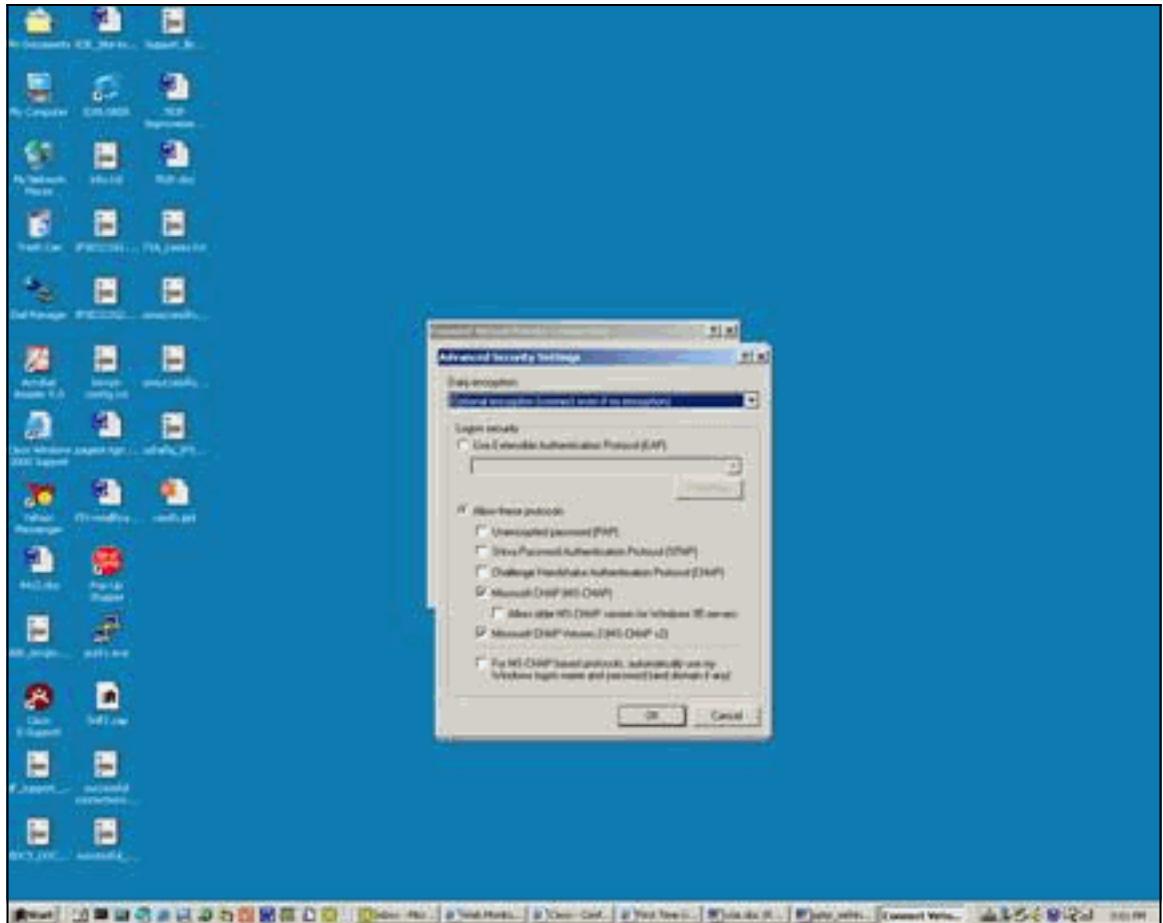

6. Depois que essa janela for exibida, escolha Propriedades > Segurança para definir a opção

corretamente.

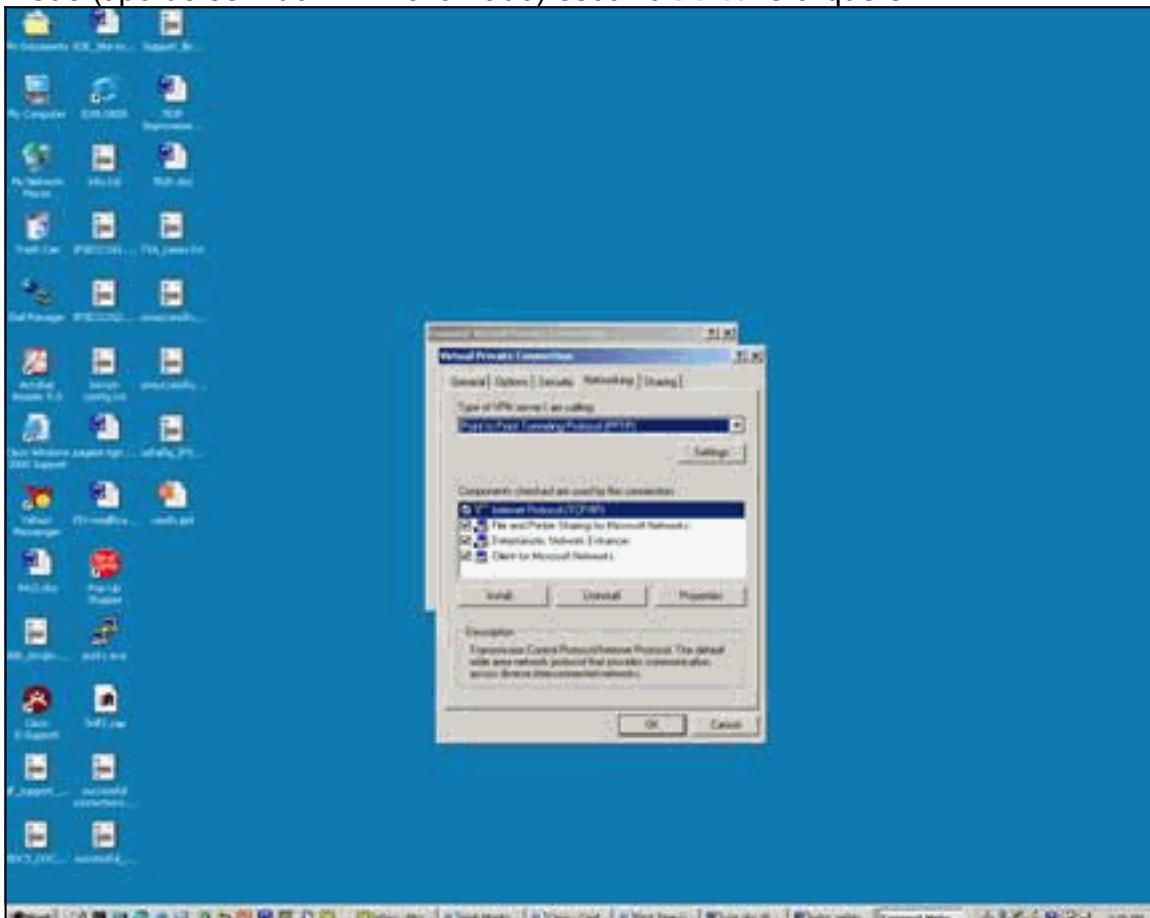

7. Escolha Avançado (configurações do cliente), escolha Configurações e selecione o nível de criptografia (Criptografia de dados) e a autenticação apropriados (permitir esses protocolos).

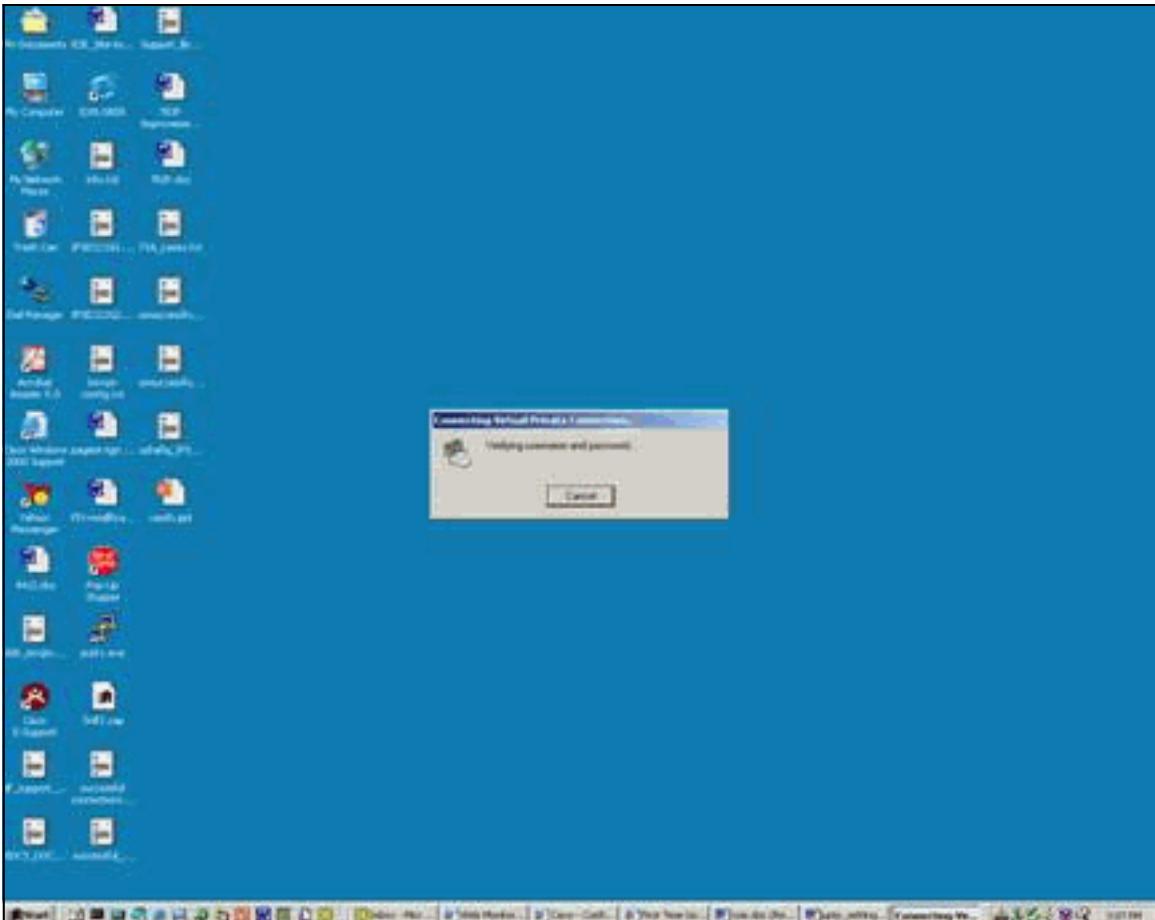

8. Em Rede (tipo de servidor VPN chamado) escolha PPTP e clique em

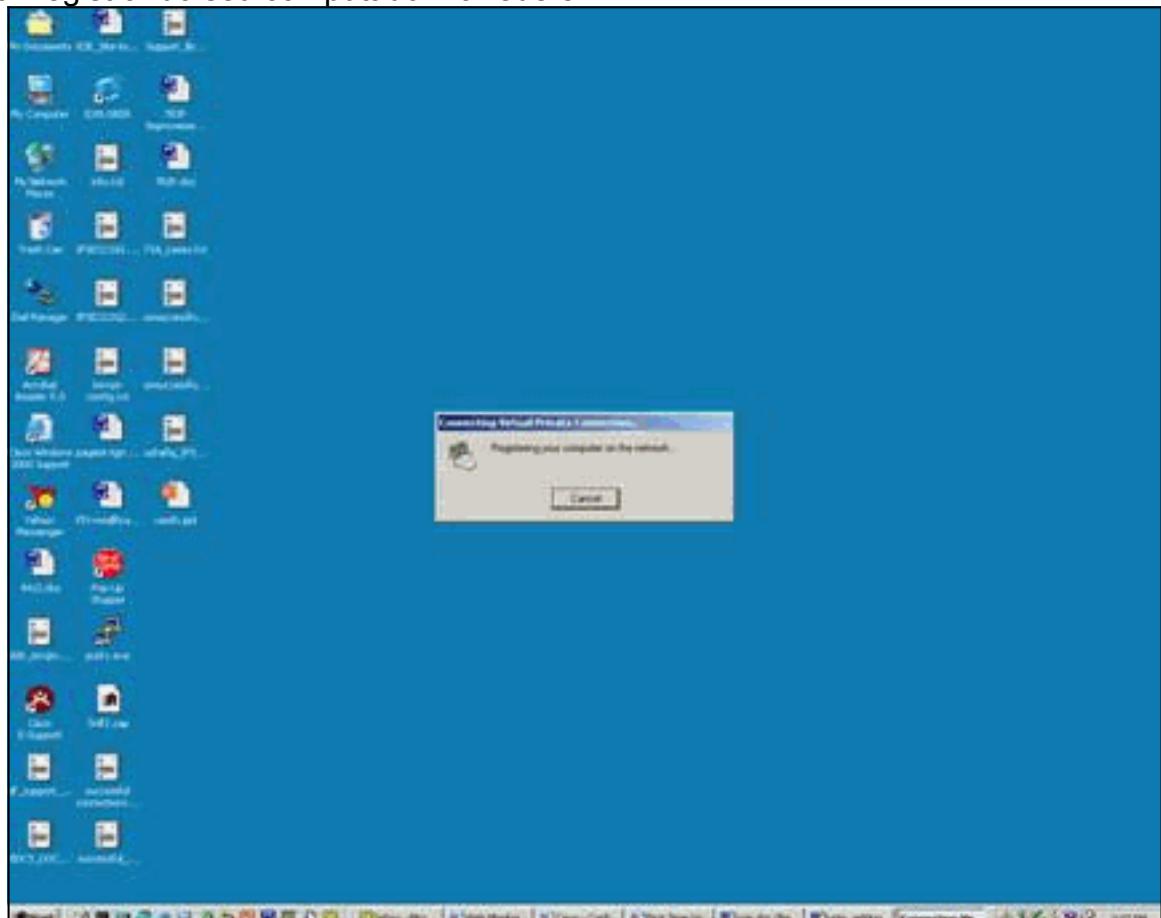

9. A janela Verifying username and password (Verificando nome de usuário e senha) é

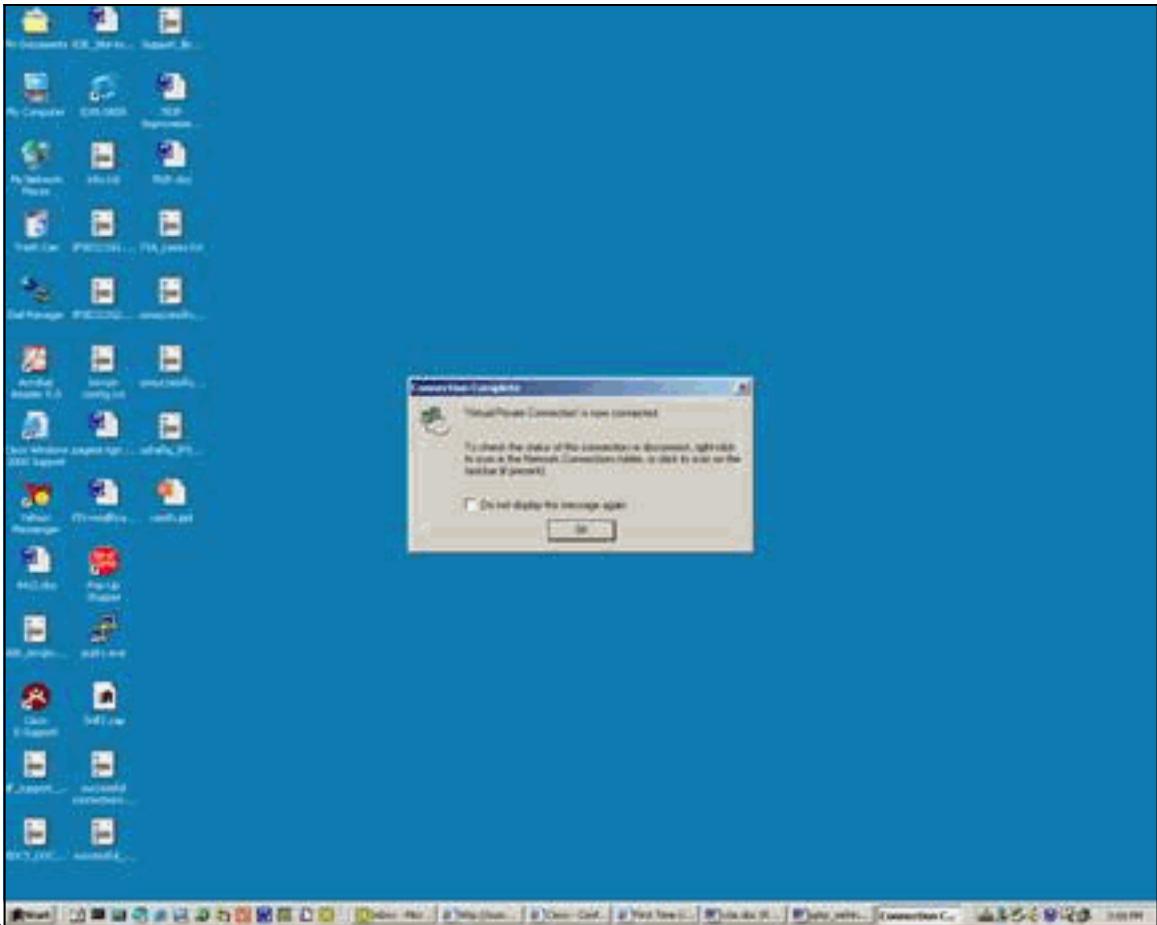

exibida.

10. A janela Registrando seu computador na rede é

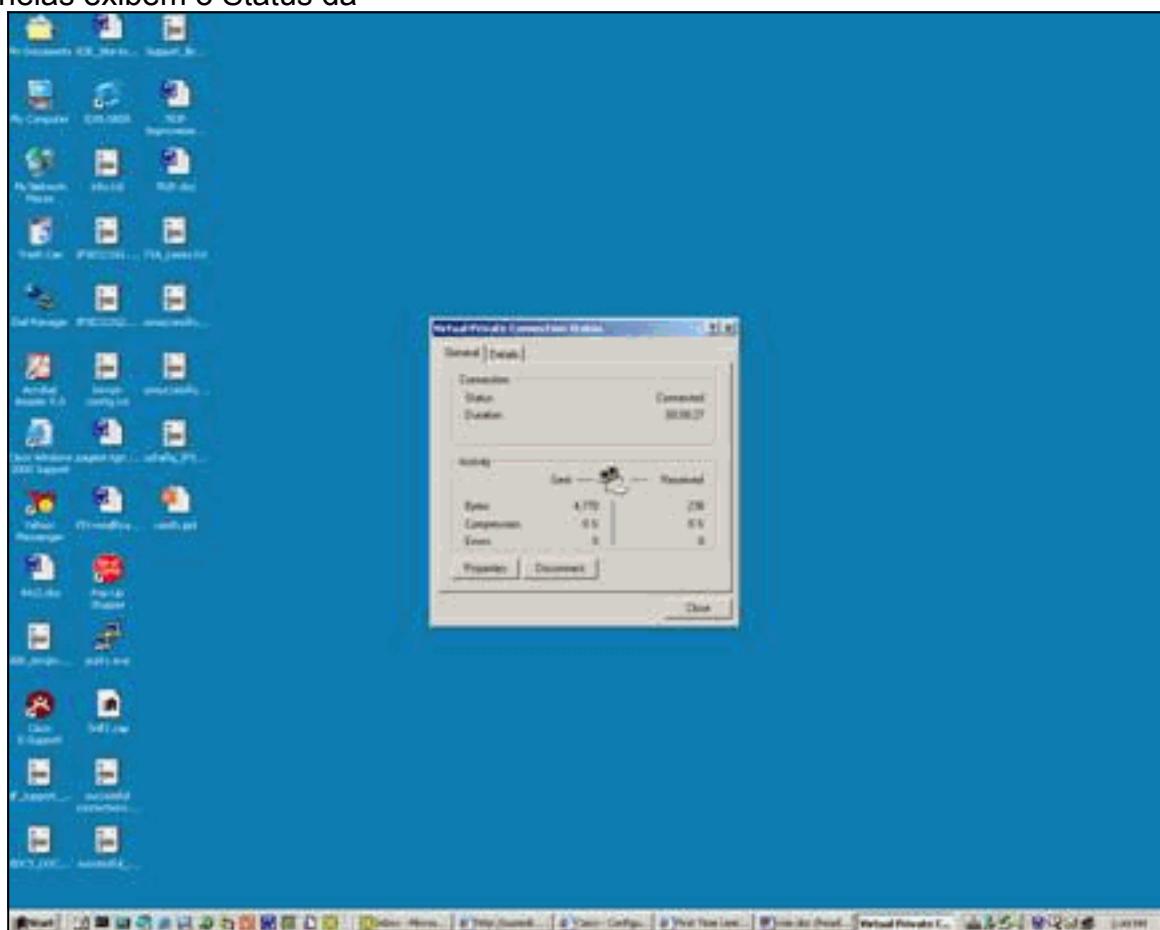

exibida.

11. A janela Propriedades de Conexões é

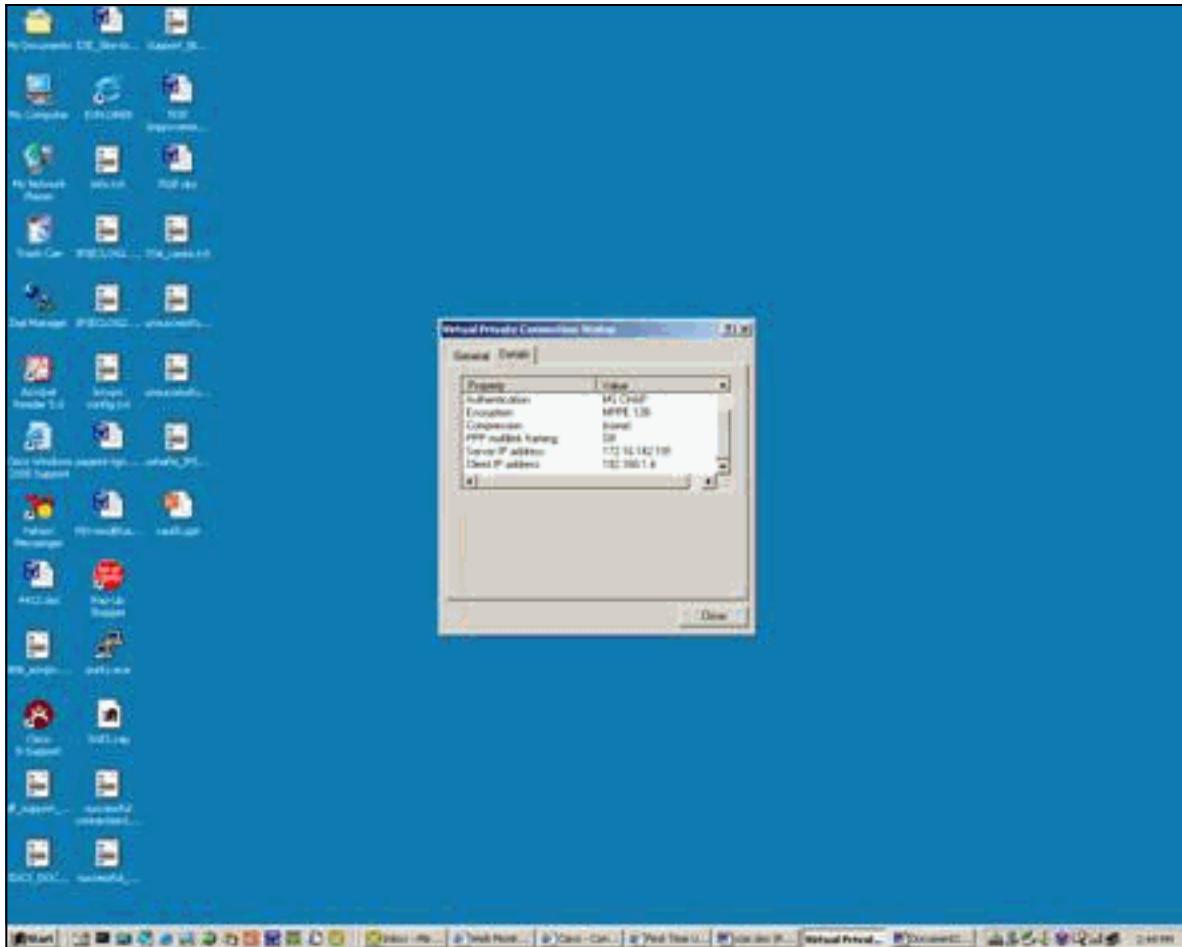

exibida.

12. Essas janelas exibem o Status da

conexão.

Verificar

Esta seção fornece informações que você pode usar para confirmar se sua configuração funciona corretamente.

A [Output Interpreter Tool \(somente clientes registrados\) \(OIT\)](#) oferece suporte a determinados comandos `show`. Use a OIT para exibir uma análise da saída do comando `show`.

- **show debug** — Exibe os comandos `debug` atualmente ativados para solucionar problemas
- **show user** — Exibe os usuários conectados no momento e seu status
- **show ip route connected** — Exibe o estado atual da tabela de roteamento
- **show vpdn** — Exibe informações sobre o túnel de protocolo L2TP (Layer 2 Tunnel Protocol) ou L2F (Layer 2 Forwarding) e os identificadores de mensagens em uma rede de discagem privada virtual (VPDN)

Este é um exemplo de saída do comando `show debug`.

```
2621#show debug
PPP:
  PPP authentication debugging is on
  PPP protocol negotiation debugging is on
```

VPN:

VPDN events debugging is on

Esta é a saída de depuração com o PPTP inicial configurado.

2621#

Troubleshoot

Esta seção fornece informações que podem ser usadas para o troubleshooting da sua configuração.

Comandos para Troubleshooting

A [Output Interpreter Tool \(somente clientes registrados\)](#) oferece suporte a determinados comandos **show**, o que permite exibir uma análise da saída do comando **show**.

Nota: Consulte [Informações Importantes sobre Comandos de Depuração](#) antes de usar comandos **debug**.

- **clear vpdn tunnel pptp** — Usado para desligar um túnel especificado e todas as sessões dentro do túnel e limpa o túnel PPTP especificado

```
2621#clear vpdn tunnel pptp ip remote 171.69.89.81
Starting to clear the tunnel
```

```
2621#
```

```
